

# Cadmould Fiber

New materials! • New challenge! • More security!

This module is available as add on module for **Cadmould Fill** and above.

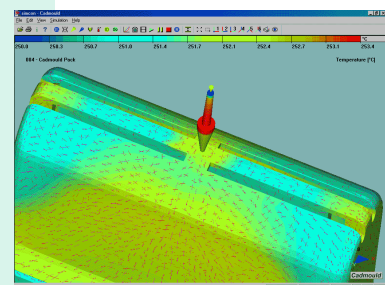

## Functions:

- calculation of the main orientations of short and long glas fibres and molecules of anisotropic materials simultaneously during filling and packing calculation

## Results:

- Fiber orientations over wall thickness in multi-layers for filling and packing phase

## Miscellaneous:

- **Cadmould Fiber** calculates in multi-layers, temperature dependant and compressible.
